1. Welcome to TD TRADER

Congratulations on acquiring **TD TRADER**, the premier institutional-grade AI trading ecosystem developed by **TechDaddy**. TD TRADER is not a basic signal alert utility; it is a full-featured automated trading terminal combining real-time multi-asset scanning, conversational voice analysis, deterministic risk controls, and automated broker execution.

CORE PHILOSOPHY: AUTONOMOUS, TRANSPARENT, PROTECTED

Every trade setup is graded with a 100% transparent Opportunity Score (0–100), narrated in real-time by TD AI Voice, and verified by an independent 16-gate Smart Risk Guardian before reaching your broker.

Ecosystem Architecture Overview

The TD TRADER architecture consists of four tightly synchronized components:

1. **Mobile & Desktop Frontends:** Built with Flutter for high performance across Android, Windows, macOS, Linux, and Web browsers, themed in official Binance Obsidian & Gold.
2. **High-Performance Python ASGI Core:** Fast, non-blocking asynchronous backend processing market data streams, signal ranking, and WebSocket communication.
3. **AI Quantitative Engine:** Advanced technical analysis (EMA, MACD, RSI, Supertrend, ATR) paired with institutional Smart Money Concepts (BOS, CHoCH, Order Blocks, Liquidity Sweeps).
4. **MetaTrader 4 & 5 Bridge:** Zero-latency Expert Advisors executing verified signals directly on your broker account with AES-256 encrypted credential handshakes.

---

2. Android Mobile App: Installation & Connection Guide

The Android app (`TDTrader-Android.apk`) provides on-the-go terminal control, live market alerts, and TD AI Voice interaction directly from your smartphone or tablet.

1 Download the Official APK

Visit the official GitHub Releases page on your Android device:

```
https://github.com/techdaddyhub/td_trader/releases/tag/v2.0.0
```

Click on **TDTrader-Android.apk** (approx. 50 MB) to initiate the download.

2 Authorize Installation of Unknown Apps

Android requires explicit permission to install direct APK releases:

- When prompted by your browser (Chrome/Firefox), tap **Settings**.
- Toggle **"Allow from this source"** to enabled.
- Return to the installer and tap **Install**.

3 Grant Audio & Network Permissions

Upon opening TD TRADER for the first time, grant the requested permissions:

- **Microphone Permission:** Required for the interactive TD AI Voice conversation feature.

- **Notifications:** Required to receive instant Opportunity Score triggers and Risk Guardian alerts.

4 Connecting the Android App to Your Trading Engine

Navigate to **Settings** (gear icon) in the bottom navigation bar:

- **Cloud / VPS Deployment:** Enter your server's public IP or domain name: `http://your-server-ip:8000` or `https://trade.yourdomain.com`.
- **Local Wi-Fi Network:** If running the Python backend on your PC, ensure your phone is connected to the same Wi-Fi, and enter your computer's local IP (e.g. `http://192.168.1.50:8000`).
- Tap **"Test Connection"**. The indicator will illuminate green (`Connected • Latency: <15ms`).

> **BATTERY OPTIMIZATION TIP**
>
> To ensure uninterrupted 24/7 background trade alerts, go to your phone's *Settings* > *Apps* > *TD TRADER* > *Battery* and select **"Unrestricted"**.

3. MetaTrader 4 & 5 Broker Bridge Integration

TD TRADER integrates with any MetaTrader broker (IC Markets, Pepperstone, FTMO, FundedNext,

Exness, etc.) using lightweight, ultra-fast Expert Advisors.

Step-by-Step Installation for MT4 / MT5

1 Locate Your MetaTrader Data Folder

Open your MetaTrader 4 or MetaTrader 5 terminal on your computer or VPS. Click on **File > Open Data Folder**.

2 Copy the Expert Advisor File

From your TD TRADER release package:

- For MT4: Copy `TDTrader_Bridge_MT4.mq4` into `MQL4/Experts/`.
- For MT5: Copy `TDTrader_Bridge_MT5.mq5` into `MQL5/Experts/`.

In MetaTrader, right-click on the **Navigator** window and select **Refresh**. The bridge will appear under Expert Advisors.

3 Configure WebRequest Whitelist (Crucial)

In MetaTrader, click **Tools > Options** (or press `Ctrl+O`), then open the **Expert Advisors** tab:

- Check **"Allow algorithmic trading"** (or "Allow automated trading").

- Check **"Allow WebRequest for listed URL"**.

- Click **Add new URL** and paste your TD TRADER backend URL:

  `http://127.0.0.1:8000` (if on same PC) or `http://your-server-ip:8000`.

- Click **OK**.

4 Attach Bridge to Chart

Drag `TDTrader_Bridge_MT4` or `TDTrader_Bridge_MT5` onto any chart (e.g. EURUSD M15). In the Inputs tab, verify:

- `ServerUrl`: `http://127.0.0.1:8000`

- `AccountId`: Your designated account ID (e.g., `1`)

- `PollIntervalMs`: `500` (sub-second execution polling)

Click **OK**. Look for the smiling face or green icon in the top right corner of your chart.

BI-DIRECTIONAL TELEMETRY CONFIRMED

Once attached, your MetaTrader balance, equity, margin, and open tickets stream live to your TD TRADER mobile app and desktop terminal.

---

4. Mastering the 5 Core AI Modules

Module 1: AI Multi-Market Scanner

The AI Scanner continuously monitors hundreds of instruments across five supported asset classes:

Market Category	Sample Instruments	Scanning Capabilities
Forex	EURUSD, GBPUSD, USDJPY, AUDUSD, USDCAD	Trend alignment, multi-timeframe confirmation (M5-D1)
Crypto	BTCUSDT, ETHUSDT, SOLUSDT, BNBUSDT	Volatility breakouts, 24/7 momentum shifts, volume analysis
Precious Metals	XAUUSD (Gold), XAGUSD (Silver)	Supply/Demand zones, liquidity sweeps, London/NY session peaks
Indices	US30 (Dow), NAS100 (Nasdaq), SPX500, GER40	Market structure changes (CHoCH, BOS), Opening bell momentum
Commodities	USOIL (WTI Crude), UKOIL (Brent)	Key support/resistance, ATR volatility expansion

Understanding the Transparent AI Opportunity Score (0–100)

Every scanned setup is assigned a verifiable mathematical score:

- **Trend Alignment (Max 20 pts):** Alignment across EMA 20, 50, and 200.
- **Technical Confirmation (Max 20 pts):** Confluence between RSI, MACD, and Supertrend.
- **Momentum Strength (Max 15 pts):** Acceleration rate and directional candle volume.
- **Market Structure (Max 15 pts):** Validated Break of Structure (BOS) and Change of Character (CHoCH).
- **Volatility Alignment (Max 10 pts):** Average True Range (ATR) expansion without exhaustion.
- **Risk / Reward Profile (Max 10 pts):** Setups offering a minimum of 1:2.0 or 1:3.0 R:R ratio.
- **Strategy Validation (Max 10 pts):** Quantitative backtested win-rate over 500+ historical cycles.

Module 2: TD AI Voice – Personal Trading Analyst

TD AI Voice provides an audio copilot that keeps you informed of market action without requiring you

to constantly stare at screens.

Voice Personalities

- **Aria (Fintech Pro):** Polished, articulate, institutional trading terminology.
- **Marcus (Institutional Quant):** Data-centric, probabilistic risk assessments and mathematical focus.
- **Elena (Macro Strategist):** Emphasizes economic events, currency correlations, and liquidity flows.
- **Leo (Disciplined Risk Mentor):** Focused on psychological discipline, capital preservation, and drawdown control.

Voice Commands & Conversational Inquiries

Tap the **Microphone Button** in the Voice Assistant screen and speak naturally:

- *"Analyse gold for me."* → The AI summarizes current XAUUSD trend, support/resistance, and ATR.
- *"Explain the latest signal."* → Details the exact criteria that triggered the top-ranked setup.
- *"What is my account risk today?"* → Reports open floating risk, margin usage, and daily loss cushion.
- *"Which market has the strongest setup?"* → Identifies the highest Opportunity Score instrument.

> **STRICT FACT VS. INTERPRETATION SEPARATION**
>
> TD AI Voice always clearly distinguishes **Verified Facts** (confirmed broker balance, ticket status, fill price) from **AI Interpretations** (probabilistic forecasts and pattern predictions).

Module 3: Smart Risk Guardian (Automated Protection Engine)

Operating completely independently from the AI language model, the Risk Guardian enforces 16 strict mathematical rules to guarantee your capital is never wiped out.

Risk Gate	Default Setting	Automatic Action When Breached
Risk Per Trade	1.0% of Equity	Automatically calculates dynamic lot size based on stop loss pips.
Max Daily Loss	$500.00 / 3.0%	Suspends all new entries for the day; announces via TD AI Voice.

Max Daily Drawdown	5.0%	Locks terminal; cancels all pending unfilled limit/stop orders.
Max Open Trades	5 Concurrent	Rejects 6th order signal until an existing trade is closed.
Correlated Exposure	Max 2 same-currency	Blocks 3rd EUR or USD pair to prevent over-concentrated risk.
Mandatory SL / TP	Enforced	Rejects any order submission lacking verified Stop Loss parameters.
Consecutive Losses	3 in a row	Enters a 60-minute cooling-off period before allowing new trades.

Emergency Control Panel

Located on the Risk Guardian dashboard for instant one-touch manual intervention:

- **PAUSE AI TRADING:** Instantly suspends automated signal taking while leaving open positions monitored.
- **STOP ALL NEW TRADES:** Rejects all incoming signals across all connected broker accounts.
- **CANCEL PENDING ORDERS:** Flushes all pending limit and stop orders from your broker.
- **CLOSE ALL OPEN POSITIONS:** Liquidates all active open tickets (requires explicit double confirmation).

Module 4: AI Strategy Backtester

Validate any trading thesis before committing real funds using historical intra-bar simulation.

- **Intra-Bar Precision:** Simulates high-low-close tick progression within each bar, accounting for broker spread, commission, and slippage.
- **Walk-Forward Efficiency (WFE):** Splits data into In-Sample (training) and Out-of-Sample (testing) windows to detect curve-fitting. A WFE score above 60% indicates a robust strategy.
- **Comparative Matrix:** Test MA Crossover, RSI Dynamic Reversal, and MACD Momentum side-by-side on the same asset.

Module 5: Multi-Account Manager & Portfolio Tracker

Oversee personal accounts, prop firm evaluations, and paper trading from one centralized interface.

- **Account Isolation:** Each connected account operates under its own Risk Guardian profile. A breach on Account 1 will never affect Account 2.
- **AES-256 Fernet Encryption:** Broker passwords and investor keys are encrypted at rest with military-grade cryptography.
- **Paper Trading Simulator:** Built-in sandbox replicating real broker mechanics with zero financial risk.

---

5. Buyer FAQ & Troubleshooting Guide

Q1: Why is the Android app showing "Disconnected" from the server?

Ensure your Python backend is actively running (`uvicorn td_trader.backend.app.main:app --host 0.0.0.0 --port 8000`). If on mobile data, verify your router port forwarding or VPS firewall allows inbound connections on port 8000.

Q2: Why are trades not opening on MetaTrader?

Check the following three prerequisites in MetaTrader:

- The **"AutoTrading"** (or "Algo Trading") button in the top toolbar is green.
- In *Tools* > *Options* > *Expert Advisors*, **"Allow WebRequest for listed URL"** is checked with your backend IP listed.

•Your account balance has sufficient free margin according to the Risk Guardian rules.

Q3: Can I trade crypto on weekends?

Yes. The AI Multi-Market Scanner and crypto trade engine run 24 hours a day, 7 days a week for supported cryptocurrency pairs (BTCUSDT, ETHUSDT, etc.).

Q4: How do I update to new TD TRADER releases?

All updates are published automatically to GitHub Releases. Simply download the latest APK or desktop archive and install directly over your existing version. Your configurations and database will be safely preserved.
