1. Welcome to TD TRADER

Welcome to **TD TRADER**, the intelligent automated multi-platform trading terminal engineered by **TechDaddy**. Built with institutional-grade risk models, real-time multi-market scanning, and hands-free conversational voice analysis, TD TRADER provides a seamless quantitative workflow.

BINANCE DARK & GOLD DESIGN IDENTITY

Featuring the official TechDaddy **TD AI Robot** icon and high-contrast Binance Gold (#F0B90B) / Obsidian Slate (#0B0E11), the application provides maximum readability and professional fintech aesthetics across mobile and desktop.

---

2. Android App: Finding the Gear Icon & Connecting to PC

> #### WHERE IS THE GEAR ICON?
>
> The **Gear Icon (⚙️)** is located directly at the **Top-Right corner of the App Bar** on every screen! Next to it is the glowing **"CONNECT PC"** badge. Tapping either will immediately open the **PC Host Connection Manager**.

1 Download & Install TDTrader-Android.apk

Download the official release APK from GitHub Releases:

```
https://github.com/techdaddyhub/td_trader/releases/download/v2.0.0/TDTrader-
```

`Android.apk`

Open the APK on your Android device and allow installation from this source. The app installs with the custom **TD AI Robot Trader** launcher icon.

2 Find Your Computer's Local IP Address

To connect your Android phone to the TD Trader engine running on your PC:

- On Windows: Press `Win + R`, type `cmd` and press Enter. In the terminal, type `ipconfig`. Look for the **IPv4 Address** (e.g. `192.168.1.50`).
- On macOS/Linux: Open terminal and run `ifconfig` or `ip addr`.
- Ensure both your phone and PC are connected to the **same Wi-Fi network**.

3 Connect via the Top Gear Icon (⚙️)

In the Android app, tap the **Gear Icon (⚙️)** or the **CONNECT PC** button at the top right:

- In the **Trading Server / PC Host IP** field, enter:
  `http://YOUR_PC_IP:8000` (e.g. `http://192.168.1.50:8000`).

•If running on a VPS or cloud server, enter your VPS IP or domain.

- Tap the yellow **"TEST & CONNECT TO PC"** button.

- The indicator turns green: `Connected to PC Server! Latency: 12ms`.

3. MetaTrader 4 & 5 Broker Bridge Integration

TD TRADER connects to your live or demo MT4/MT5 broker account using zero-latency Expert Advisors.

1 Install the Bridge Expert Advisor

In MetaTrader, click **File > Open Data Folder**. Copy `TDTrader_Bridge_MT4.mq4` into `MQL4/Experts/` (or `TDTrader_Bridge_MT5.mq5` into `MQL5/Experts/`). Restart or refresh MetaTrader.

2 Whitelist Server URL in MetaTrader

Go to **Tools > Options > Expert Advisors**:

- Check **"Allow algorithmic trading"**.

- Check **"Allow WebRequest for listed URL"**.

- Add your server address: `http://127.0.0.1:8000` (or your PC IP).

3 **Attach EA to Chart**

Drag the EA onto any chart (e.g. EURUSD M15). Once active, your real-time balance, equity, and open tickets stream to your phone app.

---

4. The 5 Core AI Modules

1. AI Multi-Market Scanner

Scans Forex, Crypto (BTC, ETH, SOL), Precious Metals (Gold XAUUSD), Indices (US30, NAS100), and Oil with a 0–100 Opportunity Ranking Score based on Trend (20pts), Indicators (20pts), Momentum (15pts), Market Structure (15pts), Volatility (10pts), Risk/Reward (10pts), and Strategy Validation (10pts).

2. TD AI Voice – Personal Analyst

Provides hands-free voice alerts for signals, broker order fills, trade closures, and risk warnings. Tap the microphone in the **TD Voice** tab to ask: *"Analyse gold for me"* or *"Explain my risk today"*.

3. Smart Risk Guardian

Enforces 16 mathematical rules: automatic lot sizing, max daily loss ($500), max drawdown (5%), correlation exposure limits, and consecutive loss pauses. Includes one-touch emergency controls: **PAUSE AI**, **STOP TRADES**, **CANCEL ORDERS**, and **CLOSE ALL**.

4. Strategy Backtester

Simulates intra-bar executions with real spread, commission, and slippage. Includes Walk-Forward Efficiency (WFE) analysis to detect and eliminate curve-fitting.

5. Multi-Account Manager

Manage personal broker accounts, prop firm evaluations, and paper trading sandbox from one screen with strict account isolation and AES-256 encrypted credentials.
